

Instructions for Making the Spinner

Make the spinner by cutting a circle of cardboard the same size as the number circle on the gameboard. Cut out a triangular section to allow the number that is spun to be seen. Fasten the spinner onto the gameboard with a split pin or brad. If these aren't available, use a normal pin. You might want to cut off the pointy end before bending it over.. Before securing the pin through the gameboard, add a bead, button, washer or several small circles of cardboard onto the pin, between the spinner and the gameboard. This will allow the spinner to spin freely. Secure the end of the bent pin, split pin or brad to the back of the gameboard with tape.

Make sure that the spinner is the same size as the corresponding circle with numbers on the gameboard.
